

Multiglide

The Multiglide is a continuous nylon loop glide sheet suitable for all types of transfer situations where reduced friction underneath the pressure points is needed. The Multiglide sheets are easy to apply and remove after use. Multiglide can easily be wiped off with disinfectant or machine wash. Please consult product label for further washing instructions.

Multiglide low-high friction

Multiglide is used for all types of positioning and transfer situations where reduced friction is required. These a continuous nylon loop glide sheets have low friction on the inside while the outer surface is treated with polyurethane that provides higher friction which prevents sliding out of position. The friction caused by movement is transferred to the low-friction inner surface and therefore allows smooth movement.

IM130	Multiglide low-high, open at 130 cm	130 x 80 cm
IM83	Multiglide low-high, open at 72 cm	72 x 130 cm
IM66	Multiglide low-high, open at 60 cm	60 x 60 cm
IM77	Multiglide low-high, open at 72 cm	72 x 70 cm

Multiglide low-low friction

Multiglide with low-low friction is used for all types of positioning and transfer situations where reduced friction is required. The continuous nylon loop glide sheets have low friction in both inner and outer surfaces, providing smooth movement. Multiglide low-low-friction is also available in rolls.

IM00103	Multiglide low-low, open at 100 cm	100 x 103 cm
IM0083	Multiglide low-low, open at 72 cm	72 x 130 cm
IM0066	Multiglide low-low, open at 60 cm	60 x 60 cm
IM0077	Multiglide low-low, open at 72 cm	72 x 70 cm

Multiglide terry cloth

Multiglide terry cloth is a continuous nylon loop glide sheet with low-friction nylon inner side and terry cloth surface on the outside. The terry cloth surface provides a more comfortable position and allows the product to remain under the patient for a longer period. Multiglide with terry cloth is especially suitable for the self-sufficient client, allowing smoother positioning and transfer.

IM70/70	Multiglide with terry cloth, open at 70 cm	70 x 70 cm
IM90/100	Multiglide with terry cloth, open at 90 cm	90 x 100 cm

One Man Sling

One Man Sling is a unique tool used for positioning the client higher up in bed, and is adapted for situations with only one caregiver. Using the One Man Sling requires application of a low-friction product underneath the client's pressure points, such as Sling On, Multiglide, Transfer Mattress, Transfer Cushion, etc.

The loop side is attached to one side of the bed frame at head end and the sling is placed around the client, with the slide cushion under the buttocks. By using the handles the caregiver can slide the client to a higher position in the bed. The One Man Sling transfers the pressure and the friction point inside the slide cushion allows a smooth movement and prevents shear and friction sores. Maximum user weight: 150 kg

IM460	One Man Sling, 6 handles	7.5 x 270 cm
