

E-Board

The E-board is used in many different transfer situations between wheelchair, bed, bathing chair, car seat, etc. It is made of a strong polyethylene material with flexible side wings and is therefore easy to place in front of the wheelchair's wheel, thus protecting the client from becoming soiled. A smooth top-side allows easy sliding transfer, while the non-slip surface on the underside prevents the board from sliding out of position.

IM404	E-Board max 150 kg, black	60 x 33 x 0,5 cm
IM405	E-Board max 150 kg, black	75 x 33 x 0,5 cm
IM408	E-Board max 150 kg, black	60 x 25 x 0,5 cm
IM410	E-Board max 150 kg, black	45 x 20 x 0,5 cm

Swan

The Swan glide board is also the smallest and lightest of the glide boards, and therefore a good alternative for an active lifestyle, as it can easily be carried along in the wheelchair bag.

Swan is a universal glide and transfer system consisting of the Swan glide board and/or Swan glide pad with handles. The Swan system is used for transferring in and out of bed, wheelchair, car, chair, etc. The components can be used together or separately, depending on situation and assistance.

IM2698121	Swan glide pad max 140 kg	140 x 45 cm

Butterfly

The Butterfly glide board is designed for transfer between wheelchair, bed, bathing chair, car seat, etc. It is designed with special cutouts to better fit and position to the wheelchair's wheels and the non-slip areas on the underside prevents the board from sliding out of position. The smooth surface allows easy sliding transfer across the board. The Butterfly board can also be used with the additional Butterfly glide wings, which are attached to the board by Velcro straps, and which provides a further low-friction surface between the person and the board.

IM4001	Butterfly glide wing, Large	40 x 31 cm
IM4002	Butterfly glide wing, X-Large	50 x 31 cm

3B-Board

The 3B-Board is a curve shaped glide board used in many transfer situations between wheelchair, bed, bathing chair, car, etc. The curve shape together with the smooth synthetic material allows easy sliding into position, either in a caregiver-assisted transfer situation or without personal assistance, when the client has enough strength in arms and body and good balance to perform the transfer.
